

# HOW TO MAKE A COMPOST BIN IN 4 EASY STEPS?

## STEP 1

Prepare a compost bin.  
Line the bottom of the bin  
with dry leaves.

## STEP 2

Fill the first  $\frac{1}{4}$  of the bin  
with soil. Next, fill the rest  
of the bin with food waste.

## STEP 3

Mix & keep it in a warm  
and humid place. Top off  
with soil to deter pests.

## STEP 4

Mix the compost pile once a week  
to help aerate the mixture to  
encourage decomposition.

# WHAT CAN BE COMPOSTED?

EGG SHELLS

COFFEE BEANS

BREAD/WHEAT

FRUITS

VEGETABLES

# WHAT CANNOT BE COMPOSTED?

TO PREVENT PESTS AND UNPLEASANT SMELLS, AVOID THESE TYPES OF FOODS:

DAIRY

MEAT

OIL

FISHBONES

# BENEFITS OF COMPOSTING

## REDUCE LANDFILL WASTE

1

Diverts materials from going to landfills and lengthen the capacity of landfills.

## RETAINS MORE WATER

2

Strengthens soil's ability to retain water.

## REDUCE SOIL EROSION

3

Composting restores topsoil and build stable soil structure.

## REDUCE NEED FOR SYNTHETIC FERTILISERS

4

Reduces the need for additional fertiliser because it can provide nutrients.

## HELPS CARBON SEQUESTRATION

5

Improves soil structure to lower greenhouse gases.
